SCIENTIFIC WORD TIPS... June 2014

You can customize any shell you are working in with Latex "insert-adustment" commands.
Hit the TEX button and open a page; type in the Latex command that will then go into your Sci Word document.
Some simple, useful customizings commands to insert:

(1) space between lines, change numerical value around 1.0
.....   \baselineskip=1.2\baselineskip

(2) start a chapter somewhere in say a book shell, with heading "Once Upon a Time"
....   \chapter{Once Upon a Time}

(3) move footnotes to end of document (type footnotes as usual in the text)
.... \setcounter{endnote}{0}   gets placed at beginning of document
and   \theendnotes   gets placed at the end in the place you want the footnotes to commence,
or for starting the end footnotes at a new page at the end, then
.... \newpage
     \begingroup
     \theendnotes
     \endgroup
