

This gives a description of all the files in this directory

- The main figures in Appendix C are produced using `mkgr_AC.do`
  - This just uses `out.raw` which contains the auxiliary model on the actual and simulated data
- Figure 2 is the human capital simulation
  - `parin` is the parameters
  - `simhc.jl` reads in the parameters and simulates the profiles
  - `mkf2.do` plots the output from this
- Figures 3 and 4 are the counterfactual simulations
  - the `xb*.raw` are all raw simulations from the model under the various counterfactuals
  - `mkf34.do` reads in this data and simulates the results
