

# ECON BOOT CAMP

## A Training Manual for The New PhD Student

**Christopher Ferrall**

**Department of Economics**

**Queen's University**

August 28, 2014

# Preface

## Table of Contents

Front Material .....	i
I. Basic Concepts and Results .....	1
A. Numbers and Proofs .....	2
A1. Proof by Contradiction. ....	4
A2. Mathematical Induction. ....	7
B. Sets, Mappings and Metrics .....	11
D1. Taxonomy of Set (Intuition) .....	11
D2. Functions and Correspondences .....	12
D3. Inverse Image .....	13
D4. Metric Space (T8.1.1) .....	16
D5. Vector Space .....	18
D6. Norm on a Vector Space .....	19
D7. Vector Inequalities .....	20
D8. Important Classes of Functions .....	21
D9. Neighborhood .....	22
D10. Max and Min, Sup and Inf .....	22
D11. The Completeness Axiom .....	23
D12. Taxonomy of Sets (Formal) .....	24
C. Sequences, Series and Continuity .....	26
D13. Sequence .....	26
D14. Types of Sequences .....	27
D15. Limit of a function .....	27
T1. Sequences .....	28
D16. Complete Metric Space .....	28
D17. Continuity .....	29
D18. Compact Set .....	30
T3. Heine-Borel .....	30
D19. Uniform Continuity .....	32

T4. C on C implies UC .....	33
T5. Continuity Again .....	34
T6. Weierstrass .....	35
D. Linear Systems .....	36
D20. Matrix Taxonomy. ....	36
D21. Matrix Operators and Functions. ....	37
T7. Linear Systems .....	38
T8. L-U Decomposition .....	40
A3. Solving $Ax = b$ . ....	40
D22. Symmetric Matrices .....	41
T9. Cholesky Decomposition .....	41
E. Projections and Spaces .....	42
D23. Rank and Column Space .....	42
D24. Dimension of the Column Space .....	44
T10. The dimension of the column space .....	44
D25. The Null Space .....	45
T11. Column and Null Space .....	45
D26. Eigenvalues and Eigenvectors .....	46
F. Derivatives .....	47
D27. The Gradient .....	48
D28. Level Curves. ....	48
D29. The Jacobian .....	50
D30. The Hessian .....	51
G. Integrals .....	52
D31. Tagged Partition of an Interval .....	52
D32. Riemann Sum .....	52
D33. Riemann integral .....	53
T12. The F T of C .....	53
T13. Riemann Integrable .....	55
H. Correspondences .....	56
D34. Inverse Images of Correspondences .....	57
D35. Hemi-continuity .....	58

I. Random Variables and Distribution .....	60
D36. Basic Probability Concepts .....	60
D37. Independent Random Variables .....	62
D38. Expectation and Moments. ....	64
D39. Quantiles and Order Statistics .....	65
D40. Normal Distribution. ....	66
D41. Normal-related Distributions. ....	68
II. Intermediate Concepts and Results .....	71
A. Difference Equations .....	71
D42. Elements of a Dynamic System .....	71
D43. Linear Homogeneous .....	73
D44. Diagonalization .....	74
T14. Diagonalization .....	74
B. Stochastic Processes .....	75
D45. Discrete Markov Process .....	75
D46. Ergodic Distribution .....	78
A4. Compute Stationary Distribution .....	80
C. Differentiability .....	81
D47. Differentiable functions .....	82
T15. Differentiability, Derivatives and Continuity .....	82
D48. Classes of Functions .....	83
T16. Taylor .....	84
D. Square Non-Linear Systems .....	85
T17. The Inverse Function Theorem .....	86
T18. The Implicit Function Theorem .....	88
E. Unconstrained Optimization .....	89
T19. Theorem of the Maximum .....	90
D49. Taxonomy of Optima .....	91
D50. Taxonomy of objectives part I .....	92
T20. Necessary and Sufficient Conditions .....	93
F. Equality Constrained Optimization .....	95
D51. The Lagrangian .....	96

T21. Local Constrained Maximization .....	97
T22. Envelope .....	100
G. Inequality Constrained Optimization .....	101
D52. Kuhn-Tucker .....	102
A5. Kuhn-Tucker Programming .....	103
H. Projections and Least Squares .....	104
D53. Projection Matrix .....	104
I. Probability and Measure .....	107
D55. Sample Space and $\sigma$ -algebra .....	108
D55. Probability .....	108
D56. Borel sets .....	109
D57. Lebesgue Measure .....	110
D58. Stochastic Convergence .....	111
T23. Chebyshev Inequality .....	112
T24. Simple Law of Large Numbers .....	112
T25. A Central Limit Theorem .....	113
A6. Derive the likelihood for an IID sample .....	114
D59. Maximum Likelihood Estimator (MLE) .....	115
D60. Properties of an Estimator .....	115
T26. Asymptotic Properties of MLE .....	117
D61. Orders of magnitude .....	118
III. Advanced Topics and Results .....	123
A. Fixed Points .....	123
D62. Operators and Fixed Points. ....	124
T27. Brouwer's Fixed Point Theorem .....	125
T28. Kakutani's Fixed Point Theorem .....	127
T29. Existence of a Nash Equilibrium .....	129
B. Sequential Decisions Part 1 .....	130
T30. Principle of Optimality .....	133
T31. Existence of an Optimal Strategy .....	137
C. Contractions .....	138
D63. The sup-norm of a function .....	138

D64. The L-2 norm .....	139
D65. Contraction .....	140
T32. A contraction is uniformly continuous .....	140
T33. Contraction Mapping Theorem (CMT) .....	140
T34. Completeness with sup norm .....	143
T35. Blackwell's Sufficient Conditions .....	144
D. Sequential Decisions Part 2 .....	146
D66. DP Inf. Horizon .....	147
T36. Principal of Optimality, Infinite Horizon .....	148
T37. Bounded Dynamic Programming .....	150
T38. Existence of the value function .....	151
T39. Location of the fixed point of a Contraction .....	152
T40. Monotonicity of the Value Function .....	154
T41. Concavity of the Value Function .....	155
E. Sequential Decisions Under Uncertainty .....	157
D67. DP Under Uncertainty .....	157
IV. Basic Numerical Methods .....	173
A. Derivatives and Non-Linear Systems .....	208
A7. Newton-Raphson (Compute Jacobian) .....	232
A8. Broyden (Approximate Jacobian). .....	244
B. Optimization .....	248
A9. Line Optimization .....	252
A10. Steepest Descent .....	261
A11. Newton. ....	268
A12. Quasi-Newton .....	275
A13. Nelder-Mead Amoeba (Simplex) .....	287
C. Integration and Simulation .....	295
D68. Autocorrelation .....	313
D69. Pseudo-Random Number Generator (pRNG) .....	315
A14. ....	316
A15. Monte Carlo Experiment .....	318

**List of Figures and Tables**

Figure 1. Udraw Inverse Images of $x^2$ .....	14
Figure 2. Udraw Illustrate equal distances around a point. ....	17
Figure 3. Udraw Illustrate Euclidean norm and metric .....	19
Figure 4. Udraw Vector Comparisons .....	20
Figure 5. Udraw C on (0,1) but not UC on (0,1). ....	32
Figure 6. Udraw Tiny Circles in the Set .....	33
Figure 7. Udraw Properties of continuous mappings. ....	34
Figure 8. Udraw Necessity of Weierstrass Assumptions .....	35
Figure 9. Udraw Subspace of lower dimension .....	44
Figure 10. Udraw $h'$ and $\nabla f$ . ....	49
Figure 11. Riemann Sum .....	52
Figure 12. Finite discontinuities .....	54
Figure 13. Udraw Hemi Continuity .....	59

Figure 14. Udraw The Jacobian Vanishes? .....	86
Figure 15. Udraw The Jacobian Vanishes .....	98
Figure 16. Udraw The Geometric Interpretation of OLS .....	106
Figure 17. Udraw Necessity of Brouwer Assumptions .....	125
Figure 18. Udraw Not UHC and $\psi$ is not convex .....	127
Figure 19. Udraw Work Backwards! .....	132
Figure 20. Udraw Contraction in $\mathfrak{R}$ .....	142
Figure 21. Udraw Monotonicity and Discounting .....	144
Figure 22. Udraw Contraction maps into a subset .....	152
Figure 23. Udraw Reservation Wages .....	165
Figure 24. Udraw Newton-Raphson Iterative Root Finding .....	232
Figure X. Walk like an Amoeba .....	288
The Autocorrelation Function .....	314
Inverting the CDF at a Pseudo $U$ .....	317

**List of Definitions**

D1. Taxonomy of Set (Intuition) .....	11	D25. The Null Space .....	45
D2. Functions and Correspondences .....	12	D26. Eigenvalues and Eigenvectors .....	46
D3. Inverse Image .....	13	D27. The Gradient .....	48
D4. Metric Space (T8.1.1) .....	16	D28. Level Curves. ....	48
D5. Vector Space .....	18	D29. The Jacobian .....	50
D6. Norm on a Vector Space .....	19	D30. The Hessian .....	51
D7. Vector Inequalities .....	20	D31. Tagged Partition of an Interval .....	52
D8. Important Classes of Functions .....	21	D32. Riemann Sum .....	52
D9. Neighborhood .....	22	D33. Riemann integral .....	53
D10. Max and Min, Sup and Inf .....	22	D34. Inverse Images of Correspondences .....	57
D11. The Completeness Axiom .....	23	D35. Hemi-continuity .....	58
D12. Taxonomy of Sets (Formal) .....	24	D36. Basic Probability Concepts .....	60
D13. Sequence .....	26	D37. Independent Random Variables .....	62
D14. Types of Sequences .....	27	D38. Expectation and Moments. ....	64
D15. Limit of a function .....	27	D39. Quantiles and Order Statistics .....	65
D16. Complete Metric Space .....	28	D40. Normal Distribution. ....	66
D17. Continuity .....	29	D41. Normal-related Distributions. ....	68
D18. Compact Set .....	30	D42. Elements of a Dynamic System .....	71
D19. Uniform Continuity .....	32	D43. Linear Homogeneous .....	73
D20. Matrix Taxonomy. ....	36	D44. Diagonalization .....	74
D21. Matrix Operators and Functions. ....	37	D45. Discrete Markov Process .....	75
D22. Symmetric Matrices .....	41	D46. Ergodic Distribution .....	78
D23. Rank and Column Space .....	42	D47. Differentiable functions .....	82
D24. Dimension of the Column Space .....	44	D48. Classes of Functions .....	83
		D49. Taxonomy of Optima .....	91
		D50. Taxonomy of objectives part I .....	92

D51. The Lagrangian	96
D52. Kuhn-Tucker	102
D53. Projection Matrix	104
D55. Sample Space and $\sigma$ -algebra	108
D55. Probability	108
D56. Borel sets	109
D57. Lebesgue Measure	110
D58. Stochastic Convergence	111
D59. Maximum Likelihood Estimator (MLE)	115
D60. Properties of an Estimator	115

D61. Orders of magnitude	118
D62. Operators and Fixed Points.	124
D63. The sup-norm of a function	138
D64. The L-2 norm	139
D65. Contraction	140
D66. DP Inf. Horizon	147
D67. DP Under Uncertainty	157
D68. Autocorrelation	313
D69. Pseudo-Random Number Generator (pRNG)	315

## List of Theorems

T1. Sequences	28
T3. Heine-Borel	30
T4. C on C implies UC	33
T5. Continuity Again	34
T6. Weierstrass	35
T7. Linear Systems	38
T8. L-U Decomposition	40
T9. Cholesky Decomposition	41
T10. The dimension of the column space	44
T11. Column and Null Space	45
T12. The F T of C	53
T13. Riemann Integrable	55
T14. Diagonalization	74
T15. Differentiability, Derivatives and Continuity	82
T16. Taylor	84
T17. The Inverse Function Theorem	86
T18. The Implicit Function Theorem	88
T19. Theorem of the Maximum	90
T20. Necessary and Sufficient Conditions	93
T21. Local Constrained Maximization	97

T22. Envelope	100
T23. Chebyshev Inequality	112
T24. Simple Law of Large Numbers	112
T25. A Central Limit Theorem	113
T26. Asymptotic Properties of MLE	117
T27. Brouwer's Fixed Point Theorem	125
T28. Kakutani's Fixed Point Theorem	127
T29. Existence of a Nash Equilibrium	129
T30. Principle of Optimality	133
T31. Existence of an Optimal Strategy	137
T32. A contraction is uniformly continuous	140
T33. Contraction Mapping Theorem (CMT)	140
T34. Completeness with sup norm	143
T35. Blackwell's Sufficient Conditions	144
T36. Principal of Optimality, Infinite Horizon	148
T37. Bounded Dynamic Programming	150
T38. Existence of the value function	151
T39. Location of the fixed point of a Contraction	152
T40. Monotonicity of the Value Function	154
T41. Concavity of the Value Function	155

**List of Algorithms**

A1. Proof by Contradiction. ....	4
A2. Mathematical Induction. ....	7
A3. Solving $Ax = b$ . ....	40
A4. Compute Stationary Distribution ....	80
A5. Kuhn-Tucker Programming ....	103
A6. Derive the likelihood for an IID sample ....	114
A7. Newton-Raphson (Compute Jacobian) ....	232

A8. Broyden (Approximate Jacobian). ....	244
A9. Line Optimization ....	252
A10. Steepest Descent ....	261
A11. Newton. ....	268
A12. Quasi-Newton ....	275
A13. Nelder-Mead Amoeba (Simplex) ....	287
A14. ....	316
A15. Monte Carlo Experiment ....	318
